Printed for JAMES HOLLAND, at the Bible and Ball in St. Paul's Church Yard; LUKE STOKOE, near Charing-Crofs; RICHARD MONTAGUE, in Sheer-Lane; and JOHN SACKFIELD, at Lincoln's-Inn Back-Gate. MDCCXXI:

TOHIS GRACE THE

Duke of Montague.

MYLORD,

STRANGER humbly prefents to Tour Grace the following Pages ; he has very good Reafons to be-

lieve, they cannot shelter themselves under the Protection of a Patron more A 2. proper

proper than the Duke of MONTA-GUE.

MY LORD,

I do not address my self now to a Priest, or a Levite, inured to shedding Blood; who, insensible to the Groans of a Wounded Traveller, pass regardless by: But I have the Honour now to speak, as to a good Samaritan, whose Profession is to Heal; and yet, as much as possible, to conceal from the Eye of the World, his Charities and Benefactions.

Alas ! What signify those pompous, mad Buildings, erected at vast Expences, and richly founded, if their Poor Inhabitants pass a tedious Life in a Splendid Poverty; or rather, have the Honour to die daily in Places fit for Monarchs, while those who ought to have the Care

Care of them, luxuriously riot, and grow fat, on the very Blood and Vital Marrow of the poor Invalids.

Not (o, my Noble Lord, is our Profession : A true Believer will not reveal to any one his good Works, but to such only to whom it may belong; does Acts of Charity in Silence, covers all with the profoundest Secrecy, and receives from within that sublime Satisfaction, which none but good Men know. This is what makes us truly Great, and truly Noble : This elevates us to the highest Degrees of true Glory, and makes us equal with Kings. It is the most pretious, and most valuable Jewel in the World; a Jewel of great Price, redder and more sparkling than the finest Rubies, more transparent than the purest Chrystal of the Rock, brighter

brighter than the Sun, shining in Darkness, and is the Light of the World, and the Salt and Fire of the Universe.

Your Grace, who is Master of so many illustrious Qualities, which make a Man truly Great, knows the Importance of this Eternal Truth; and as you have hitherto practis'd, as well as speculated, pur sue your glorious Enterprize; do good to your poor Brethren, (for we are Children of the Great One Eternal GOD, the Lord and Master of us all) and especially, if we should, (as we richly deferve it) be visited with a Contagious Distemper, exert your (elf ; Remember the Poor, and take Care to provide them with proper Medicines : The Motto of the good Samaritan is, I Cure and fay Nothing.

I speak with the Liberty of a Lover of Truth, not as a Mercenary Dedicator, who racks his Brains to flatter his Patron. This Philalethes never did, nor will; and I know your Grace hates it as much as I do. But while I presume to talk after this Manner, I have not the Vanity to imagine I have said any thing that may inform your Grace, or tell you what you did not know before : Learned Men hear Sermons, not to be instructed in what they knew, as well as, (and sometimes perhaps better than) the Preachers, but they consider them as so many leasonable Remembrancers, or like a faithful Clock, that warns his Master of the Hour of the Day.

In this Light, I hope your Grace will confider Philalethes : Tou are the Master, and I the Clock, an Automaton,

tomaton, a Movement, moved by the first great Spring, and strikes accordingly.

I am,

My LORD, With entire Submission, Your Grace's true, Most Obedient, and Most Humble Servant, EUGENIUS PHILALETHES, Jun.

TREATISE of the PLAGUE.

ECCLES. Ch. vii. V. xiv. In the Day of Prosperity be joyful ; but in the Day of Adversity consider.

F ever France had Reason to be joyful, the has as much Reason now to confider the greatest Adversity that ever could befall an unhappy. People, now involving some of

her richeft Cities in the most inexpressive Mifery and Woe. When I talk after this Man-B

2

ner, every Body knows I mean the Plague, which now rages with fuch invincible Fury in its extreme Parts ; and, in all Probability without a particular Turn of Providence, muft rage too in its very Bowels. And thus, France, once the Terror of its Neighbours, is now become the Object of their Pity and Commiferation. Alas ! How are the Mighty fallen ! How unfearchable, O Thou One Eternal Being, are thy Counfels, and thy Ways past finding out ! Indeed, human Life is Nothing but one con-

Indeed, human Life is Nothing but one continued Series of Miferies; and we are born to Trouble, which is as natural to befall us, as for the Sparks to fly upwards; or to use the Words of a Modern * Author, Our Life is checquer'd with Misfortunes, or rather, it is a Piece of Mournful Mosaick, where the Black far exceeds the White. Well then may we be allowed a little Mirth in our short Prosperities, by the Preacher, when our long Adversities furnish us with Matter of so much Consideration.

The Time of Confideration is arrived; Adverfities enough furround us through the unnatural Ruin of our own once flourishing and glorious Country, and how far the dreadful Calamity, raging fo furiously among our Neighbours may reach us, Heaven only knows. Proximas ardet, when the next House is on Fire, it

* In the 2d Vol. of the Penitential Tables, a Work printed for J. Sackfield, near Lincoln's Inn. See Dedication to Lady Harpur.

it requires all our ferious Confideration, Attention, and Application, to prevent catching hold of our own.

To do this, we ought to make use of all the Helps of Nature and Art; and the rich, who have Means to procure both, will not want all poffible Aid and Care : The Poor and the middle Sort, are here, as in all other Cales, to be the greatest Sufferers. It is for the Sake of those I publish this small, but I hope, useful Treatise.

The Physicians and Apothecaries furely will not take this amifs, it would be cruel to think fo; I know there are but two forts of thefe, the Good, and the Bad ; the Good will not, and as for the Bad, those very few are not worth our Notice.

I am very well fatisfied, that there have come into the World a great many ingenious Treatiles relating to the Plague ; but as they have been, for the most Part, very speculative, they have served rather to display the fine Genius of their feveral Authors, than to be of any real Use to Mankind. Alas! What avails it to know the nice Definitions of a Diftemper, its remote and proximate Caufes, and a long Jargon of Particles, Effluvias, Insects, and that infinite Gallimatias of Pestilential and pestiferous Vehicles, if I know not how to preferve my felf from their Contagion, or rid my felf of it, when I am fo unhappy as to labour under it? What I shall do then, in the following Pages, B 2 15

is in the plaineft and moft eafy Terms, familiar to the meaneft Capacity to write what I have learnt in relation to that which may be ferviceable to my Reader concerning the Plague, which I am afraid, I have too just Fears, will, in all Probability, without a particular Providence of the most High, visit our already too wretched and undone Country.

But that I may not burthen my Readers Memory and Attention, I shall, as short as the Nature of the Thing will admit of, present them with what are my Sentiments hereupon ; and for Order Sake, divide this little Treatise into four Heads or Chapters.

- I. The First relates to Apparel or Lodging. II. The Second to Diet.
- III. The Third to Antidotes or Preservatives : And,

IV. The Fourth to such Medicines as are necessary to be made Use of, when any one shall be so unhappy, as to be visited with the Distemper.

СНАР.

CHAP. I.

Of Apparel and Diet.

THO' at all Times we ought to abfain from all Manner of Excefs, yet chiefly ought we fo to do in the Time of Peftilence; efpecially from Excefs of outward and inward Heat, as that of the Sun, Fire, Cloaths, and hot Air, all very pernicious; this I call outward Heat; inward Heat is fuch as proceeds from too much eating of Salt, and falted Meats, Spices, and all Food of a ftrong and intenfe Heat, and all ftrong Malt Liquors, and ftrong Wines and Spirits.

Violent Exercifes are alfo to be avoided, fuch as provoke *Sweatings*, and particularly, *Coition*, and all the Paffions of the Mind. One muft likewife abftain from all Repletion of Meat and Drink, that is, to rife from Table without loading your *Stomach*. The other Excefs too is equally dangerous, I mean too great a Hunger and Thirft; a great deal of Sleep,

Sleep, especially at Day-Time, is also to be carefully avoided, as well as letting the Body be too much bound up or costive : Thus much in General.

As to Apparel, what is made of Linnen, is certainly beft ; thick Woollens are apt to gather Infections; but Silk and Furs, and Stuffs made of Hair, are principally to be fhunned, becaufe they very eafily admit the contagious Air, and retain it a long while. But above all, let every body be particularly careful in being clean in their Drefs, as well as Lodging. *Hangings* are by no Means to be allowed, bare Walls, or plain, unpainted Wainfcot, are the beft Furniture; thefe cannot be kept too frefh and clean.

The frequent Washings among the Jews, though they had something mystical in them, and were a Part of their Religion, were yet very conducive to Health; and in Reality, there can be no Religion in being a Sloven; Paupertatem & non Sorditiem Habitus diligit Deus, God loves the Poverty, not the Slovenlines of a Habit, faid St. Bernard, of some dirty Religious of his Time. The good old Man thought there was no Religion at all in being dirty or loufy.

The first Thing that is to be done in the Morning by those that wear their Hair, is to comb it with an Ivory Comb Forty Times at least, from the Forehead towards the Pole; after that, let them wash all the Organs of the Sense,

Senfes, that is, the Eyes, Ears, Mouth, Tongue, and Teeth ; in fhort, the whole Face, with pure Water , and they who wear Wigs, are to wafh their Head in like Manner. The Eyes are not only to be wafhed, but dipt, or plunged into cold Water, and all the Foulnefs removed from the Eye-lids with this cold Water ; it is very neceflary fometimes to mix Rofe-water, or Fennel-water and good ftrong Whitewine Vinegar ; and after the Neck is wafhed, which muft never be omitted, let it be rubbed with a Towel, fomewhat coarfer than ordinary. All this comforts the Body, makes the Mind more lively and chearful, and preferves the Sight.

The Gums and Mouth ought to be particularly taken Care to be washed and cleansed, and especially the Teeth; to do which, nothing is more proper than the following Dentifrices, or Teeth-Powders, viz.

A cheap Powder to cleanse the Teeth.

Take three dried Egg-shells, of Rcd Coral three Drams, a small Quantity of the Threads of white Silk burnt to Ashes in a new earthen Pot or Pipkin; Cinnamon, one Dram; Cloves, two Drams; Pelitory-Root, two Drams.

8

Reduce all to a very fine Powder, and rub your Teeth every Night and Morning, wafhing them with cold Water mixed with Vinegar, or Rofe-water, or both : you may buy the Red Coral of the Apothecary, ready powdered.

Another.

Take of Red and White Coral, of each one Ounce; Pelitory-Root, Mace, and Mastick, of each an Ounce; of Pumice-stone, and Bole Armoniack, of each an Ounce.

moniack, of each an Ounce. Reduce all to a very fine Powder, fearfing the fame through a Tiffany Searfe, as you should the former.

Purify your Chamber and your Cloaths with clear Fires made of Juniper, Cyprefs, Pine, or Afh-wood; as allo with frequent Sprinklings of Rofe-water and Vinegar. It is alfo very good to ftrew about your Rooms, fweet Herbs, and Flowers, as Rofes, Violets, Vine-leaves, Pennyroyal, Thyme, Lavender, and the like, and frequently to make use of feveral Kinds of odoriferous Fumes to purge and purify the Air, and perfume your felf and Cloaths, and very often to wash your Hands and Face every Day with Water mixed with Vinegar and Rofewater, and never go abroad without a Piece

of the Root of Dittany, or Zedoary, or some candid Spice, in your Mouth, and a Nosegay, or some refreshing Perfume in your Hand; among which, I recommend a little Box of Warham's Apoplectick Balsam, made only at the Golden Ball in Fisher-Street, near Red-Lyon-Square ; which is of wonderful Efficacy, and with which it is good to anoint or fmear a little the Temples, Eye-brows, and Noftrils: and always just before you go out, take a Piece of Bay-leaf, or Orange-peel, or Juniper Berries, which being bruiled and foaked in a little Vinegar, pour upon a red hot Iron, hold your Head over the Fumes, receiving them into your Mouth, Nostrils, and every Part of your Body and Cloaths. Some will not go out without a little Bunch of Hyflop, or Rue, which is very good.

Those who can take Tobacco, would do well to fmoke a Pipe in the Morning the first thing they do. Dr. Evans, of St. John's College in Oxford, told me not long fince, that he defigned Tobacco should be his chief Medicine whenever it should please God to visit us, and that he would fume his Chambers and Cloaths with nothing elfe; which may be very good for those who are used to Tobacco; and I have been told, that during the last Sickness in London, the Tobacconists escaped the Contagion.

Having

Having mentioned feveral Fumes and fweet Waters, I fhall here give a Receipt how to make those most useful, which because they are cheap, and easily made, may probably be not much esteemed by some, who love Nothing but what is costly ; but I write for the general Good.

A Receipt for an Uleful Odoriferous Sweet-Water.

stivileon mon

Take of Role-water, and strong White-Wine, that is, good Mountain, or Lisbon, (Madera, if you can conveniently have it) of each an equal Quantity; of Vinegar of Roles, a Fourth Part; Loaf Sugar, a third Part; which dissolve therein; some add a little Saffron, which is certainly better.

With this wafh your Hands, Face, and 'Joynts, as alfo your Eyes, and rince your Teeth, and fprinkle with it your Linnen; and if you fwallow down a little, it would not be amifs. But that you may not miftake the Quantities of each, I fhall here give a particular Receipt or Recipe.

Take of the best Vinegar of Roses, four Ounces; of Rose-water, and the strongest and best slavour'd White-wine, of each one Pound, that is, of each a Winchester Pint; of the best Saffron, one Scruple; of Loaf-Sugar,

Sugar, to be dissolved in the Liquor, 3 or 4 Ounces.

Another.

Take a Pint and a half of Rose-water, in which half an Ounce of Cinnamon has steeped two Days; of Mace, one Dram; Violet Roots, two Drams; of Cloves, half a Dram; Nutmeg, one Dram; all which having distilled, add five Grains of Saffron.

Another more coftly.

Take of Rose-water, three Pints ; fresh Lavender Flowers well picked, three Handfulls ; fresh Cloves and Cinnamon, of each half an Ounce ; White Violet Roots, two Drams ; Mace, two Drams ; dry'd Rose Leaves, one Handful ; Gum Benzoin, vulgarly call'd Benjamin, two Drams ; Storax Calamita, two Drams ; Musk and Amber, two Grains. Add to these an Ounce of strong Mountain Wine, set all, being well mixed in a Glass Vessel well stopt, in the Sun for one Month.

Sweet Candles, good against the Plague, and all Pestilential Distempers.

Take of Labdanum, three Ounces; Storax, ten Drams; Benzoin, six Drams; Frankin-C 2 cense;

cenfe, half an Ounce ; Stæchas, two Ounces ; Damask Roses, three Ounces ; Cloves three Ounces ; Lemon Peel, and Sandalum Citrinum, of each two Drams ; Juniper Berries, half an Ounce ; Musk and Amber, a sixth Part of a Dram ; Charcoal, half a Pound, sinely powdered.

Let all these be mixed up with Rose-water, and Gum Tragacanth, and put over a Fire, till they are reduced into a Passe, of which make small Candles, and let them dry gently.

How to make little sweet Balls, good also against Infection.

Take of Storax, and Benzoin, of each an Ounce; Labdanum and Mastick, of each half an Ounce; Cloves, Xyloaloes, and Sandalum Citrinum, of each one Dram; Guinea Pepper, two Drams; with a little Turpentine, of which make little Balls.

These may be perfumed with six Grains of Musk and Amber, dissolved in Oyl of Cloves.

How to make sweet Pastills.

Take of Gum Benzoin, two Ounces; Cinnamon, and Xyloaloes, or Lignum Aloes, of each balf an Ounce; Storax, one Ounce; fine Sugar, eight Ounces; Musk, fixteen Grains, diffolved in Rose-water. All which mix up with an Infusion of Gum Tragacanth in Rose-water.

12

A rare curious Receipt how to make other Odoriferous Paftills more rich and coffly, particularly made use of by the Countess of Arnsburg, which I here infert as a very valuable Rarity.

Take four Ounces of White Roses, pull off the Leaves, to which, after they have been well pounded in a Mortar, add two Ounces of Gum Benzoin, that has lain twenty four Hours dissolv'd in Rose-water; to these add, of Amber, two Grains; Musk, one Grain; and the fourth Part of a Grain of Civet. Mix these last well on a Marble Stone, and then incorporate them with the Roses.

Add to all half an Ounce of the fineft Sugar, let the whole, being well ground together, ftay eight and forty Hours ftopt clofe up in a Mortar, out of which make your Paftills; but you must not forget to mix with it fome Gum Tragacanth disfolved in Rosewater, and roll up every Pastill in a little Dragon's Blood, that they may dry the sooner, then wrap up every Pastill in two Rose Leaves.

But becaufe burning of these Candles, Balls, and Pastills, must necessarily occasion Smoke in the Rooms where they are so burnt, which may in some measure affect the Head and Lungs, I would advise you to cast them into a filver Dish, or (those who cannot have Silver, may

14

may make use of what they can get, an earthen Pipkin well glaz'd will do, or a Tin or Pewter Dish, but by no Means use Brass or Copper) which set over a Lamp or Candle, and the Fumes will be more agreeable.

This manner of Fuming is frequent among the Italians, especially among Persons of Distruction; who have generally one of these Sweet Pots fuming in a Corner of their Rooms.

You may use any of the Sweet Waters above-mentioned, after this manner.

I have been the longer on this Head, and have defcribed the greater Variety of Receipts, according to the Variety of the Seafon, and my Readers Purfes ; but for the poorer Sort of all, I fhall give them a Receipt which they may almost always make ufe of, which is as follows :

Take a little White Wine Vinegar, if you add Rofe-water, 'twill be the better ; which fet over a Lamp or Candle, when it begins to fume, put in two or three Bay Leaves, a few Cloves, a little Cinnamon and Mace, all bruifed, and let all fume together ; a little Seville Orange Peel, or Lemon Peel, makes it yet more agreeable.

These Fumes are excellent against all manner of *Pestilential Infection*, and purify the Air.

And

11 10 .040

And befides all these, you must often wash your Mouth with Vinegar, boiled up with Rue and Hyflop, and efpecially when you cannot get any of these Fumes, tho' I think it will be almost an Impossibility not to compass what I have last described; but never be without a Piece of Zedoary, which now and then you must chew, especially when you go abroad.

CHAP. II. Of Diet.

T is very ealy to describe what Kind of Diet should be used in such Times of Sickness, but it is not so easy for all People to observe it. I shall only say in general, that such Food as the Appetite most delights in, is the best: and of Consequence, that which it does not care for, ought to be avoided. I do not speak here of a depraved Appetite, which has been ruined and debauched by Luxury, for there can be no Rules prescribed for such, at least what it will observe.

The fimpler, and the more plain the Diet is, the better. And here I could wish Man had kept up to Nature, and followed what the great Creator of all Things had pre-

prefcribed to the Infant World, and had ftill fed on that innocent Food, the Fruits and Herbs of the Earth, and Milk, and the Golden Productions of the Industrious *Bee*: Then would his Blood have flowed free from those noxious Juices engendred from fuch a Heterogeneous Commixture of the Spirits of fo many Thousand Animals which an unbounded cruel Luxury continually facrifices and delights.

Before the Flood, Men did not eat the Flesh of Animals, and yet they lived much longer.

The *Jewiß* Law, indeed, in fome measure indulged its Followers in this Respect; but it must be remembred, the Bill of Divorce was in like manner tolerated, for the Hardness of their Hearts. The Flesh Pots of *Egypt*, (the *French* Ragous of that Time) ran in their Minds; but a Toleration is a quite different Thing from an Approbation; and how many Restrictions this Toleration was attended with, every one knows that looks into the Bible; the most delicious Food was absolutely forbidden, as Swines Flesh, and all Shell Fish; and the manner of dressing was such, as required the utmost Scrutiny in Relation to the Health of the Animal; and the Blood, as the Life or Soul, was particularly prohibited.

But: the Christian, who has a better Religion, who profess to follow a suffering Lord, and Self-denying Saviour, tyrannizes over the whole

16

whole Creation, flies at all, and without the least Remorse or Scruple, devours Things strangled, and swallows Blood, though expresly forbidden in the same Place with Fornication, in that which he owns to be written by Infpiration, and a Law decreed by the Holy Ghoft.

The poor Cow, to instance no more, after having fed Families with her own Dugs, must by cruel, ungrateful Man, be knock'd on the Head, for all her good Offices, and at last devoured ; and the tender Lamb, just dropt from its Mother, (true Emblem of fweetest Innocence) be inatched, kneeling at the Teat, and facrificed to fatisfy the Appetite, perhaps of a lewd Harlot.

It is true, Man is the Lord of the Crea? tion; fo is a Master of his Family: But what Lord devours his own Subjects? Or, what Father feasts upon his own Children and Servants ?-

I could answer all the vain, idle, frivolous Objections, that have been railed against this unlawful Practice of destroying the Creation; but my Businels is not to write of Controverly, but Health ; and however novel this may feem to fome, I am fure, its opposite is only an ancient inveterate Error.

And I am satisfied, that Men, if they would or could abstain from eating the Flesh of Animals, wou'd find themselves much better in Health; for it is that dreadful mixture of the

18

the Souls, if I may fay fo, of fo many thouland Animals, deftroy'd to pamper one, that raifes that terribleWar in the Blood, which has made it a Prey to fuch Diftempers, as have baffled the Skill of the most learned Physicians.

Let ns cast our Eyes towards India, and we shall see the Brachmans, or Bramins, who never eat the Flesh of Animals; and yet they live frequently to an Hundred Years of Age.

In Italy, there is a Religious Order called the Camaldolese, or Monks of St. Romuald, who look healthy, and live long, and by their Profession they neither eat Flesh nor Fish.

The Monks of La Trappe in France, do the fame. This Regimen of Life renders the Paffions calm and quiet; while your Flefh-Devourers are foon irritated, immediately take Fire, and even, in fome Senfe, participate of the Nature of the Brutes they feed on.

And then how many Delicacies may be made without the Death of Animals ? how many Ways of dreffing Herbs and Fruits, wirh Milk and Cream, Sugar and Honey, and Aromatick Spices ? all the innocent Luxury of Pastry and Confectionary, may here be introduced.

But

But becaule this Evil came in by Degrees, fo by Degrees it muft be extirpated; and fince it is impoffible quite to forfake it at once, we having derived from our Parents, a Blood made up of thefe Spirits, I fhall only advife my Readers to make Ufe of Flefh Diet as fparingly as poffible, efpecially in Time of *Peftilence*; let them chufe that Sort, that they know they can beft digeft, and drefs it thoroughly, and that too after the plaineft and moft fimple manner, avoiding all rich Soupes, Ragous, Fricafies, A la Royalles, a la Daubes, or a la Diables, and all those Heterogeneous, Gallican, or rather Ægyptian Slipfleps, which are poyfonous, and create fuch malignant Juices in the Blood, which eafily unite with the peftilential Effluvia, and become a proper Fewel for the *Plague*.

Broyling is undoubtedly the beft Way of Dreffing, over a clear Fire, the Meat being thoroughly first cleansed from all Blood, and moderately seasoned with Salt; for Salt savours all Things, and the Fire purifies all Things.

The next is Roafting, for the fame Reafons.

Boyling comes next, which must be done with a large Quantity of Water, that the Meat may have Room enough; and as foon D_2 as

as the Pot boils, take off the Cover, that the Steam may go up.

20

Frying and Stewing are the worft of all, unlefs the Stew-pan be uncovered ; and Frying is not very wholfome, becaufe of the Fat the Meat muft neceffarily fwim in, which hinders the Fire from paffing through the Meat. And Stewing, unlefs there be a great deal of Liquor, is only a genteel Name for Frying.

As to Sauces, or Seafoning, I recommend, efpecially with frefh Fifh, (tho' indeed I do not approve of any Fifh in the Time of Contagion: I fay, for Sauces or Seafonings, I recommend) Tormentil, Dittany, Fennel, Dill, Gentian, Zedoary, Sanders, never forgetting Rofes ; and alfo Vinegar, and Vinegar of Rofes ; efpecially, Citron, Seville Orange, and Lemon Juices ; as alfo Juice of Sorrel, Verjuice, Juice of Pomegranates and Barberries, for all Acids or Sours refuft the peftilential Poyfon, for they are refrefhing, drying, comfort and preferve ; however, if they offend the Breaft, qualify them with Sugar ; if the Stomach, with a finall Quantity of Pepper ; for Pepper refutes the Putrefaction of the Humours, ftrengthens Digeftion ; and, provided it be not ground too finall, but powdered a little, that is, juft broken, it helps the Liver.

Besides these Kinds of Seasonings, you should also use Onions, Garlick, Saffron, Radistes, Succory, Capers, pickled Cucumbers, Samphire, Mangoes, and all forts of four

four Pickles, elpecially where there is Garlick in the Pickle.

As for Drink, chuse the best of its Kind, not too strong Wine, and Malt Liquor clear and well brewed, now and then a Cordial of Epidemick Water, vulgarly called Plague-Water, and for Variety-sake, Treacle-Water; but all Things in Moderation.

CHAP. III.

Of Antidotes, or Preservatives.

THE next Thing in Order to be confidered, are Antidotes, or Prefervatives againft Pestilential Infections. In the first Place, I shall give a Description of two Anulets, which being hung about the Neck, have an extraordinary Virtue; after that, I shall give Receipts, how to make such Medicines, as inwardly taken, have had also very good Effects.

Take

21

Take of White Chrystalline Arfenick, two Ounces ; of Red, one Ounce.

Make of these two a little Cake about an Inch broad, mixed up with the White of an Egg, or a Mucilage of Gum Tragacanth, that is, with Gum Tragacanth discover in Rose-water, till it be of the Thickness of a Jelly.

Let this Cake be fewed up in a Piece of clean Linnen Cloth, enclosed with Silk, and hung about the Neck, towards the Heart.

You need not put your Shirt between ; for though Arfenick taken inwardly be mortal, not on Account of any occult Quality, but its corrofive Nature ; and fo, properly fpeaking, is no Poyfon ; yet being outwardly applied, it refifts every thing that is fo.

Another.

Take of Sapphires, Emeralds, Hyacinths, Rubies, Red and White Coral, of each one Dram; of Saffron, a Scruple; of Pearls, half a Dram; White Arfenick, two Drams; Ambergrease, fix Grains; dry'd Iris Roots, half an Ounce; burnt Hartshorn, a Dram; Orpiment, half an Ounce.

Grind all together, and make a little Bag, to be fewed up in purple Silk, and hung about the Neck, as the former.

An

22

An Antidote to be taken inwardly.

Take of dry'd Wallnuts, six Ounces; dry'd Figs, four Ounces; half an Ounce of dry'd Rue-Leaves; of Salt, two Drams.

Let all these be bruised, and steeped in Rosewater, with an equal Quantity of Whitewine Vinegar, or Juice of Sorrel, to which you may add, half an Ounce of Juniper Berries. Take the Quantity of a Chesnut of this Preparation, fasting. It is an excellent Preservative.

Another.

Take of the best Cinnamon, half a Dram; Zedoary, one Dram; Bole Armoniack prepared, three Drams; Camphire, seven Grains; Seeds of Lemons huskt, that is, the Husks taken off; of Sorrel, and Lemon Juice, of each an Ounce and a half; Roots of Dittany, Tormentill, and Pimpernell, half a Dram; Ivory Shavings, and the Bone of a Deer's Heart, of each a Dram; of Elks Hoof, Hart's Horn, and Amber, of each half a Dram.

Take of this, mixed up with half an Ounce of Sorrel Juice, or any other eager Juice, the Quantity of two Beans, fasting.

This Preservative Electuary was used with good Success by Don Priscian of Corduba, Phyfician

fician to Pope Leo X. and recommended by the famous Rantzovius.

And these Antidotes which follow have also been known to have great Success.

Take of Rose-water, Vinegar of Roses, Sorrelwater, and Mountain Wine, of each an equal Quantity; in which insufe of the Powder of Zedoary Root, Lemon-Peel, and Bole Armoniack, of each an equal Quantity; to which add a little Saffron, and, if you will, some old Conferve of Roses; put all into a Glass Bottle well stopt, and keep it for your Use; of which take every Morning, and oftentimes a Day, a little Quantity.

This Antidote is admirable, for it hinders the Putrefaction of the Blood and Humours, and powerfully refifts the pestilential Poyson.

Another.

Take of the Paste of Pill Ruffi, which having dissolved in seven times its quantity of Celadine-water, or Honey Water, which is better; distill in the Bath, after having been steep'd three Days: This is of wonderful Efficacy, being drame in a moderate Quantity, like the former.

Another Excellent Antidote.

Take of the best Venice Treacle, two Ounces; of the best Myrrh, three Drams; of the purest Camphire, two Drams. Mix

Mix all in a Pint of Role-water, of which after having steeped it three Days in Glass Vessels well sealed; drink a little every Morning.

The Electuary of Nuts.

Take of Fat Cartacs, half a Pound; of Rue, half an Ounce; of green Walnuts, a Quarter of a Pound; of Sea Salt, a Dram and a half.

Let all these be incorporated in a Mortar with clarified Honey, or Syrup of Lemons; of which take every Morning fasting the Quantity of a Hazle Nut, with a small Quantity of Vinegar and Rose-water.

I shall now give you another Receipt of great Virtue, which is,

The Electuary of Eggs.

Take a new laid Egg, which, after having taken out the White, and Cock's Tread, fill with the best powdered Saffron, then close the whole, and burn it over a slow Fire till it turn black, then grind it in a Mortar; to which add its Weight of Seed of Eruca, or white Mustard; incorporate the whole very well.

Of this Electuary take the Quantity of a Pea, every Morning, with a little Wine and Rofe-water; you may add to this, if you will, (for it makes the Composition E much

26

ก่อการ

much better). White Dittany, and Tormentill, of each two Drams; Nux Vomica, one Dram, feparately powdered before you add them to the reft. Add alfo of the Roots of Pimpernell, Zedoary, Angelica, and Camphire, and as much Treacle as the Weight of the whole.

This Electuary is not only an excellent Antidote or Prefervative, but is good when one is actually infected, in order to cure the Diftemper; to be given one Dram with Whitewine, if the Sickness begins with Cold; or with Rose-water, or Scabious Water, if with Heat; but it ought to be taken in Twelve Hours Time after the Beginning of the Diftemper

These are the best Antidotes or Prefervatives against the *Plague*, which may be used with good Success; but by no means omit taking Pill Ruffi once or twice a Week, about the Weight of a Scruple in the Morning, without any other Medicine.

But if the Seafon be very hot, then let the Aloes and Myrrh, which are in the Compolition of that Pill, be well washed in Rose-water; and you may add of the best Camphire, a third Part of the Quantity of Myrrh; but in cold Weather, and in cold Complexions, the Pill must be taken without these Prepations of Washing and Camphire.

Besides,

Befides, as thefe Pills are fomewhat too opening, it would be good in fuch Cafes, to add to them a fmall quantity of Bole Armoniack, or to roll them up in its Powder ; and as fometimes they hurt the Stomach, this Evil is to be corrected with a little Mixture of the beft Maftick, and a little Venice-Treacle, or Mithridate, that is, two or three Scruples. This is to be taken every ten Days, with a Draught of Rofe-water, or Sorrelwater.

CHAP. IV.

Medicines to be made use of when any one is so unhappy as to be visited with the Distemper.

W HEN any one finds himfelf infected, if Age or Strength permit, let him be let Blood as foon as poffible ; then let the following Medicine be immediately applied, and the fooner the better, becaufe this Diftemper admits no Delays. After that let the following Draught be immediately adminiftred, and repeated according to the Strength of the Patient.

Take of white Onions, fix in Number, which open at the Top, and take out the Heart, or Inside, fill them with Venice Treacle, mixed with a little Powder of Dittany Root and Tormentill; put them into wet Paper, and roast them

them in the Embers till they are soft, then put Part of them to the Part affected; for this being applied like a Pultise to the Boyl, is a sovereign Medicine for drawing out the Poyson.

Take the remaining Part of these Onions so prepared, and let them be bruised, and mixed with Syrup of Lemons about an Ounce, and a little Vinegar, which squeeze through a straining Cloth, and give of this Liquor lukewarm, three Ounces, and let the Patient be laid in a warm Bed, abstaining from Meat and Drink six Hours, and by all Means take Care of sleeping, which is ever dangerous in this Distemper.

This Medicine is very efficacious, expelling by Sweat the poyfonous Infection. But if you add to this a finall Quantity of the abovementioned Electuary of Eggs, it will be admirable.

But if the Patient be full of ill Humours, and not let Blood, or that it is not convenient to diminish the Blood, add a little opening Medicine to this Potion ; that is, for the weaker Sort, half an Ounce of Trifera Persica, with one Dram of the Electuary of Hamech ; for those of stronger Constitutions, instead of Trifera, add to the Confection of Hamech, an equal quantity of the of Conferve Roses, and the like of Electuary of India, and two Drams of Diafericon ; but in both Cases, give the Potion hot or warm, with Scabious Water, Rose-water, or Vinegar.

There

20

There are a great many other Medicines, which I purposely omit, these being the soonest prepared, the cheapest, and most efficacious. But the last and most excellent Remedy for this Evil, is Adam's Earth, that is, the first matter of our Creation; for this is the One and Only Medicine, and greater than which cannot be; nor will it be a little, when purged by the Artifice of Fire, and reduced to its Simplicity by a congruous Lotion. But of this enough.

He that has Understanding to understand, let him understand.

FINIS.

POSTSCRIPT.

Here follow some Receipts, that have been omitted in their proper Places.

A rare Preservative against the Plague.

AKE Wood-Sorrel, and pick it from the Stalk, and pound it well in a Stone Mortar; to every Pound of beaten Sorrel, add a Pound of fine beaten Sugar, and two Ounces of Mithridate, or Venice Treacle; which being well beaten up together, keep it in Pots for your UJe. The Dose is the Quantity of a finall Wallnut.

This is the famous Dr. Butler's Receipt, made use of afterwards by Sir Kenelm Digby, and his Family, who all of them escaped the Plague.

An Excellent Perfume against the Plague.

Take Angelica Roots, and dry them a little in an Oven, or by the Fire, then bruise them very soft;

foft, and lay them in Wine Vinegar to steep three or four Days; then heat a Brick hot, and lay fome-of it-on every Morning.

32

This is excellent to air the House and Cloaths, or to hold one's Head over every Morning Fasting.

A most admirable Receipt against the Plague.

Take three Pints of the best Canary, and boyl in it Sage and Rue, of each one Handful, till it come to about a Quart, then strain it, and putting it over the Fire again, add to it a Dram of Long Pepper, and half an Ounce of Nutmegs, all beaten together; which having boyled about a Quarter of an Hour, take it off, and diffolve in it Venice-Treacle, and Mithridate, of each three Quarters of an Ounce, and put to it a Quarter of a Pint of the best Angelica Water.

Take of this always warm, both Morning and Evening, a Spoonful or two, if infected ; it not, one Spoonful in the Morning, and half a Spoonful in the Evening Keep this, as your Life, above all worldly Treafure ; and truft to this (under GOD), for it has been obferved, that this never failed Man, Woman, or Child.
